

Pose With AI - Project Documentation

Project Name

Pose With AI

Project Title

AI-Based Smart Pose Detection and Photography Assistant

Objective

Develop an AI-powered camera assistant that detects body posture, provides pose suggestions, analyzes pose quality, and helps users capture better photos.

Problem Statement

Many users struggle to find suitable poses for photography. This project provides real-time AI guidance to improve posture and photo quality.

Frontend

HTML, CSS, JavaScript, MediaPipe Pose

Backend

Python, Flask

Database

Local Storage (Current Version), SQLite/MongoDB (Future Enhancement)

How It Works

1. User opens application.
2. Camera detects body landmarks.
3. AI analyzes pose.
4. Score is calculated.
5. Suggestions are displayed.
6. User captures photo manually.

Key Concepts

Computer Vision, AI, Pose Estimation, Real-Time Processing, Body Landmark Detection, Pose Scoring.
